

New Mexico Bird Records Committee Review List
Sartor O. Williams III, Secretary
9 February 2007

The New Mexico Bird Records Committee maintains a list of bird species for which it requests documentation of all New Mexico records. In addition, the Committee requests documentation of all New Mexico records of species not currently on the official State List and, hence, potentially new to the state. Documentation may be in the form of written details, copies of field notes, photographs (electronic, prints, slides, videotape, etc.), voice recordings, and/or information on (and the location of) specimens.

Review List species are those that are on the official State List but, in general, have been recorded on average four or fewer times per year over the previous ten-year period. Also included are certain species that pose significant identification problems. And, also included are certain very locally-distributed species that may be encountered away from their known ranges. The Review List is intended to be dynamic, with species added or removed as knowledge of their status warrants. For example, species can be removed from the Review List when frequency of records exceeds Review List criteria. The NMBRC provides standardized reporting forms, which may be obtained from the Secretary; these forms are intended as an aid in writing reports.
